

FEEDER WINDOW WIPER KIT

Part of the Stock Product Line

Features:

- Cleans viewing ports easily to give a clear view of belt tracking, tension roll position and material delivery.
- Liquid cleaning agents can be injected through the knob while feeder remains online.
- High grade corrosion resistant materials for durability and long life.
- Tempered soda lime glass for safety.
- Easily retrofits existing Stock feeders.

The Stock Window Wiper Kit for Stock Feeders gives your plant technicians a clear view of the workings of your Stock Gravimetric feeder. By being able to directly observe the belt, tension roll and coal delivery, personnel can identify feed problems before they become critical – without taking the feeder offline.

Produced from tempered soda lime glass and corrosion resistant materials the Feeder Window Wiper Kit is built for long life, just like your Stock Gravimetric feeder. And the special liquid injection feature means that you can even clean difficult coal dust build up. The kit is available as an exact replacement for the glass of your existing feeder viewing port, making installation simple and easy by your own technicians.

The Stock Window Wiper Kit is the simplest and most cost effective upgrade you can make to your existing Stock Feeders to maximize feeder uptime and performance.
